

# mdtopdf

## requires wkhtmltopdf

This is a simple utility (distributed through gem) to convert markdown into pdf.

It basically, opens a file for reading, renders its html through redcarpet and then converts into pdf with pdfkit.

I might extend it *sometime* so you can provide an external css, i guess if you really need it you could implement yourself.

## Installation:

```
gem install mdtopdf
```

## Usage:

```
mdtopdf <file>
```

this will generate `file.pdf` in the same directory.

## Heres a kitten:

(also helpful for testing the application)
